

ONLINE FOOD ORDERING SYSTEM

PROJECT TITLE

Console-Based Online Food Ordering System

OBJECTIVE

The objective of this project is to design and develop an Online Food Ordering System that enables customers to browse restaurant menus, place food orders, make payments, and track deliveries efficiently. The system manages restaurants, menu items, customer orders, payments, and delivery operations using Java and Object-Oriented Programming concepts.

TECHNOLOGIES USED

- Java
- Eclipse IDE
- Object-Oriented Programming (OOP)
- Collections Framework (ArrayList)
- Enum
- Console-Based Interface

PROJECT DESCRIPTION

The Online Food Ordering System is a console-based application developed using Java. The system allows customers to browse restaurant menus, select food items, place orders, make payments, and track delivery status through a menu-driven interface.

The application supports restaurant management, menu management, order placement, bill calculation, payment processing, and delivery tracking. The project demonstrates the practical implementation of Java programming and Object-Oriented Programming concepts in a real-world food ordering scenario.

FEATURES

- Customer Registration
- Restaurant Management
- Menu Item Management
- View Food Menu
- Place Food Orders
- Multiple Item Ordering

- Automatic Bill Calculation
- Payment Processing
- Order Status Tracking
- Delivery Management
- Admin Management
- Report Generation

CODE IMPLEMENTATION

MAIN MODULES

1. Customer Module
Handles customer information and ordering operations.
2. Restaurant Module
Stores restaurant details and menu items.
3. Menu Module
Displays available food items and prices.
4. Order Module
Creates orders and calculates total bills.
5. Payment Module
Processes customer payments.
6. Delivery Module
Assigns delivery personnel and updates delivery status.

OUTPUT SCREENSHOTS

Restaurant Menu Display:

```
<terminated> Main [Java Application] C:\Users\arsha\.p2\p
Menu of Food Hub
1 - Burger - Rs.120.0
2 - Pizza - Rs.250.0
```

Customer Order Details:

```
Order Details
Burger x 2 = Rs.240.0
Pizza x 1 = Rs.250.0
```

Automatic Bill Calculation:

```
Total = Rs.490.0  
Status = PLACED
```

Payment processing Module:

```
Status = PLACED  
Payment Successful : Rs.490.0
```

Delivery Confirmation:

```
Order Delivered.
```

Final Delivered Order Status:

```
Order Details  
Burger x 2 = Rs.240.0  
Pizza x 1 = Rs.250.0  
Total = Rs.490.0  
Status = DELIVERED
```

RESULTS

The Online Food Ordering System was successfully developed using Java and Object-Oriented Programming concepts. The application was tested with different ordering scenarios, and all functionalities worked successfully. Customers were able to browse menus, place orders, make payments, and track delivery status. The system effectively managed restaurants, menu items, and orders while demonstrating OOP concepts.

CONCLUSION

The Online Food Ordering System provides an efficient platform for handling food ordering operation. Through this project, Java programming and Object-Oriented Programming concepts were applied in a practical scenario. The project successfully demonstrates how software can automate restaurant management, ordering, payment processing, and delivery tracking in an organized and scalable manner.
